

EB-305 Energy Balancing System

Another Quality Product from Erchonia Medical, Inc.

- *Designed and developed to restore the body's energy and balance, while facilitating and aiding in its natural detoxification process.*
- *Proven in clinical trials to balance and restore the body's Ph and electromagnetic energy.*
- *State of the art research and development used to provide a form of energy that the body can readily use – "Bioenergetic/LifeEnergy".*

What it Does

The EB305 has shown in clinical trials using electro dermal scanning to improve and balance the body's energy channels or meridians. These meridians begin or end on the feet or hands and provide a pathway for energy to flow to or from a particular organ (i.e. liver, kidney, etc.). A person's current state of health is determined by how well energy flows through these meridians or energy channels.

The EB305 has also shown in clinical trials to change and balance the body's pH. Balancing the body's pH is critical in assisting the body in every aspect, from its ability to detox to its ability to digest.

How it Works

The EB305 uses direct current to create an ionic energy field in the foot bath similar to the energy produced by the human body. This energy is sub-threshold, meaning that the patient generally will not feel the treatment. The EB305 creates energy by altering the electron and proton load in water to create an electromagnetic ("Bioenergetically") altered water environment. The patient places their feet in the "Bioenergetic" water to receive the flow of appropriate ions. The energy flow from the EB305 increases the body's energetics, or simply translated "Life-Energy".

This sub-threshold energy is very similar to micro current or cold laser therapy (see www.erschonia.com), both of which have been proven to increase and create more cellular ATP, more commonly known as cellular energy. This increase in cellular ATP allows the cells to work and detoxify at a higher rate. The ability to work at a higher rate enhances the cells to withstand stressors both physical and chemical.

Why it Works

Consistent with the biological law known as the **Arndt-Schultz Law**, which states; "weak stimuli excite physiological activity, moderately strong ones retard it and very strong ones arrest it".

The biological process of energy flow within the body is best described by the Helsinki Bioenergetics Group, Institute of Biotechnology, University of Helsinki, Finland who states "Living organisms require a constant supply of energy. In cells themselves, this energy must be available in the form of ATP, but the organisms obtain energy from their environment in other, very different forms, such as oxygen, carbohydrates, light, etc. This means that living organisms must be able to efficiently convert energy into forms, which are useable in the cell".

Bioenergetics' is important because the amount of energy a person has and the balance of that energy contributes to the capacity of the body to problem solve, work more efficiently, and to detoxify.

What your patients will experience:

Healthy individuals can expect to feel lighter, more energy, and experience a greater feeling of well-being. Some patients with pain, edema, gout, headaches and swollen joints have reported immediate relief. Other patients with arthritis, allergies, lymphedema, neuralgia and other symptoms have experienced relief and benefits with multiple treatments.

Advantages of the EB305 over other machines:

- 1.) The EB305 is the only machine to use direct current similar to that of the human body. Not converted energy from A/C to D/C. The EB305 has the ability to drive both positive and negative ions.
- 2.) The advantage of this bipolar unit is the ability to alter the body's pH by using both positive and/or negative charges.
- 3.) The average treatment time is between 18 & 23 minutes. Almost half the time of other machines due to an increase in EB ion production, making the treatments more time and cost effective.

EB-305

Energy Balancing System

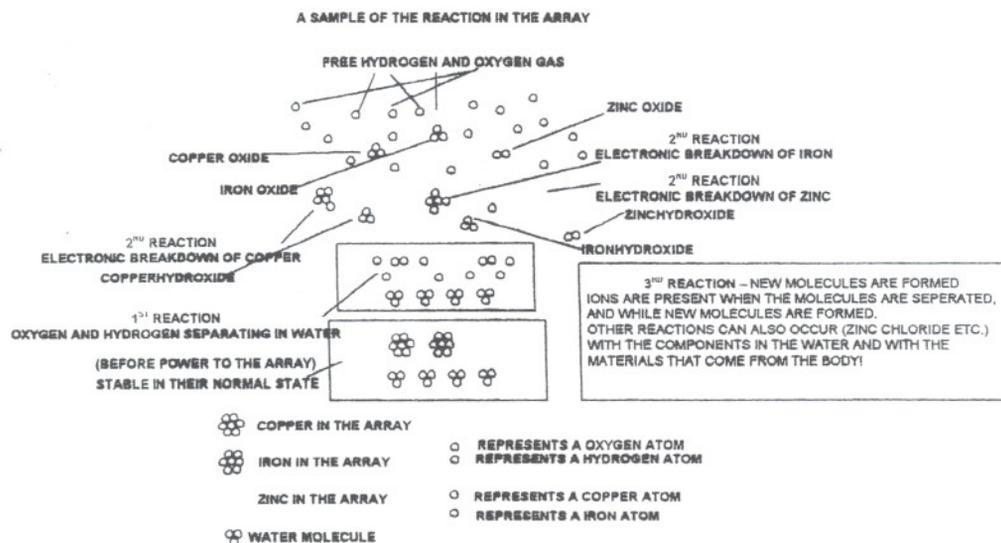

The EB-305 Energy Balancing System is designed to detoxify and balance the overall body's energy while facilitating and aiding in its natural detoxification process. It removes unwanted toxins, neutralizes and eliminates harmful free radicals by creating an ionic energy field within the body. Proven in clinical trials to balance and restore the body's Ph level and electromagnetic energy. It has also been proven to increase range of motion as well as improve overall muscle strength.

An ion is either a negatively or positively charged atom or molecule. The nature of the ion is to negate their charge or stabilize themselves by seeking a pole of the opposite polarity; if the ion is negative it seeks to stabilize itself by attaching to an ion with positive polarity and conversely when in positive mode it will seek out a negative polarity.

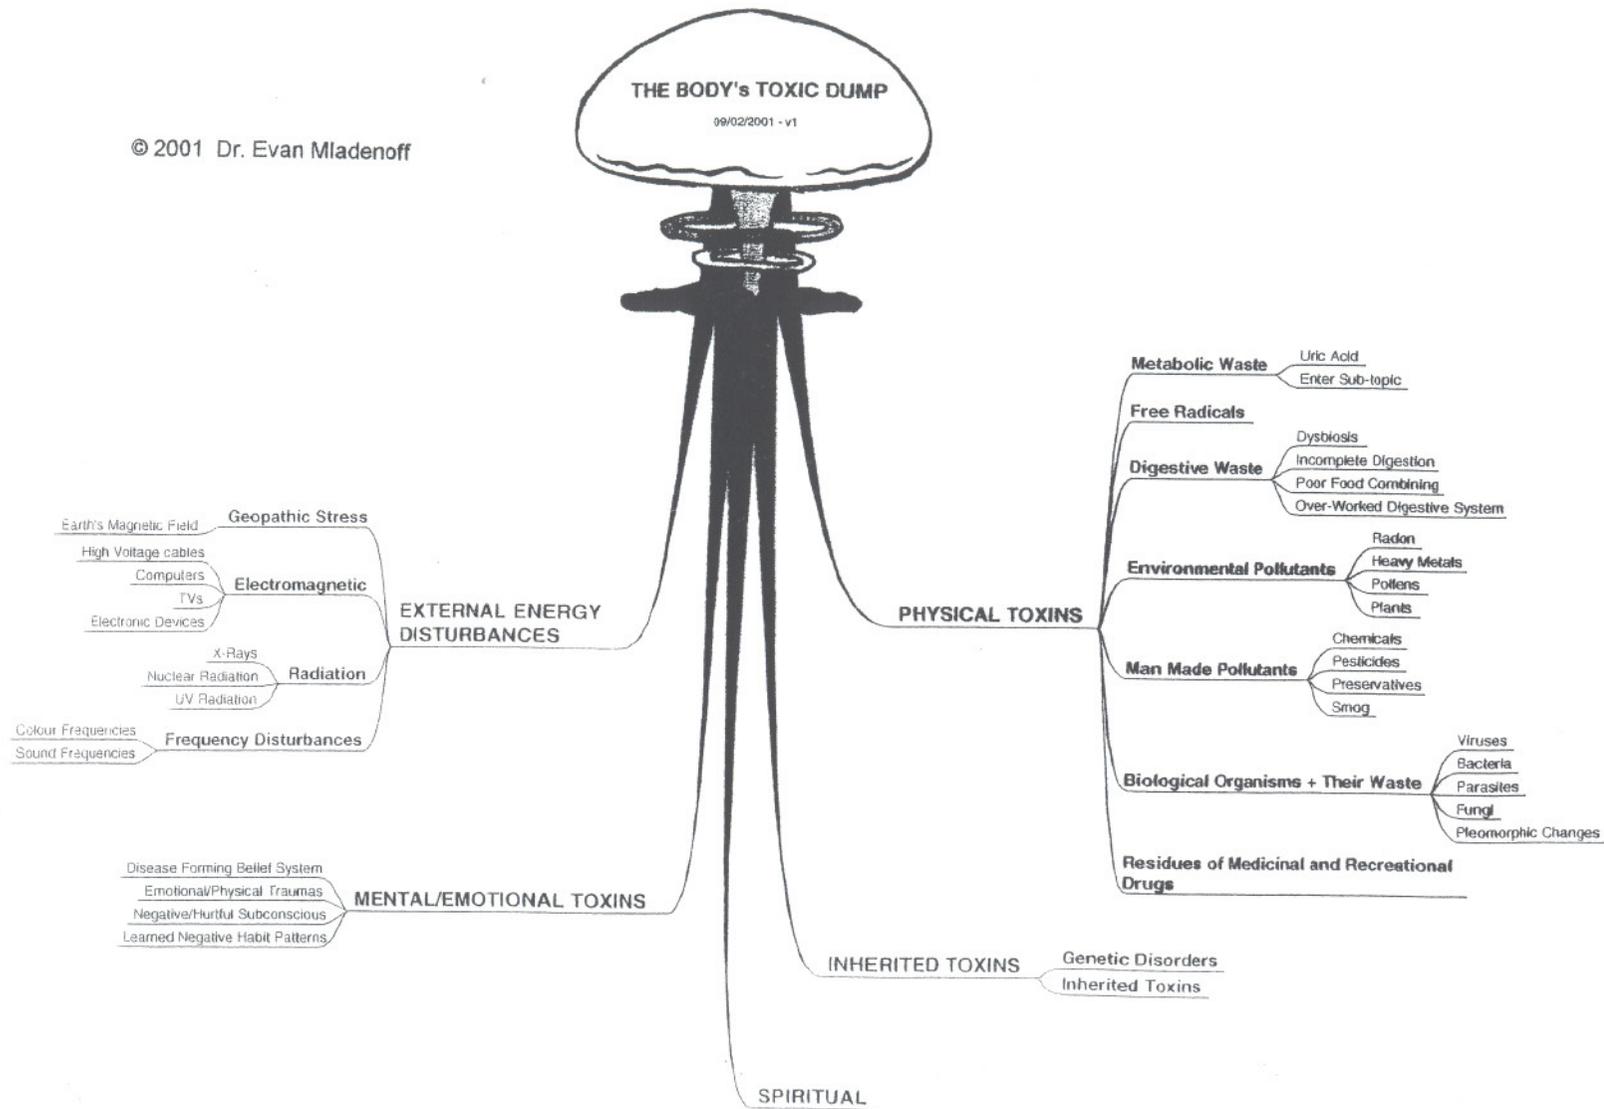

The EB-305 Energy Balancing System utilizes water as the vessel for transmitting an ionic charge into the body that is absorbed through the meridian points in the body. The energy field that is created within the body then causes opposite polarized toxins to attract to each other, thus returning them to a stable position and negating their harmful effect on the body. This polarization process or electromagnetic field that is created within the body is similar to the dust collection effect you witness on your television screen.

The EB-305 Energy Balancing System is battery operated in order to eliminate power transients (electrical power spikes that can occur from AC wall outlet) from entering the body, as they can have a deleterious effect on the body. Battery operation also ensures a consistent maximum power output not to exceed 24 volts DC @ 1.5 Amps. The ion producing array encapsulates all its operational components to further ensure safety as well as dependability with consistent results.

Frequently Asked Questions

How often can I be treated?

- *Between the ages of 10 and 65, it's recommended every other day.*
- *Over 65 the recommendation is every third day.*

Why can't I be treated everyday?

- *Daily treatments may create a healing crisis as the bodies detoxifying systems come into balance. This may cause excessive fatigue.*

How does my body detoxify in the water?

- *This detoxification occurs through the skin, which is the second largest detoxifying system in the body after the lungs.*
- *An energized and balanced body will naturally be able to detoxify at a higher rate, thereby protecting itself from further toxins, pollutants and viruses.*

Why does the water color change?

- *Due to the interaction of the toxins from the body along with the metals from the array when creating an ionic field within the water bath.*
- *The water will change color regardless of whether there is a person in the water or not, due to the metallurgic reaction of the array and the polarization of the solids and minerals in the water. However, there will normally be two-three times the cellular debris within the water when the treatment is combined with a patient.*

Why does the water color vary from treatment to treatment?

- *Variations occur due to each individual's energy state and toxicity levels as toxins in the body are re-ionized at the molecular level and react with the metals of the array.*

What do different colors indicate?

- *Some practitioners correlate color changes with areas of the body that are detoxifying.*
- *Using the MSA (Bio-Meridian Stress Assessment) in clinical evaluations and feedback from our practitioners, we see the correlation between the organs imbalance and the water colors. However, without further extensive testing being conducted, which would be financially prohibitive and medically invasive (biopsy) this is clinically and scientifically difficult to prove.*
- *Water analysis documentation from several treatments has shown a dramatic increase in metals in the water after a treatment.*
- *The changing of the water colors are not the real issue but rather the effect the energy has on the body. See attached documentation from Bio-Meridian stress assessment and Myo-Logic Diagnostics clinical trials.*

Can I touch the array during treatments?

- *Absolutely, this will not alter the treatment in any way. However, remaining relatively still will enhance the viewing of the toxins being emitted from the body as they float to the top of the water bath.*

Can I use the EB305 while taking prescription drugs?

- *Most doctor prescribed medicines will not cause any harm but the decision is best left up to you and your physician. We recommend consulting your physician prior to use.*

Should I take off my jewelry?

- *Any jewelry that will be in the water bath should be removed.*

Is the treatment safe to use for people who have metal plates in their bodies?

- *Yes! The only concern is for electrical implants. Again, we recommend consulting your physician prior to use.*

Why do some patients feel tired after a treatment?

- *Some patients may experience fatigue as the body's detoxification process accelerates itself. This will balance itself as the body expels the toxins and regenerates itself.*

What is the function of the array?

- *The array is the conductive transfer unit of the direct current into the water which generates the ionic field and hence transfers the energy into the body.*

What are the bubbles coming from the array?

- *The bubbles are the separation of the hydrogen and oxygen in the water as the ionic field is being created.*

How do I preserve and clean the array?

- *Dip the array in a solution mixture of 1 part white vinegar to 2 parts warm water for a couple of minutes. Then brush the array to remove excess particles and rinse thoroughly with warm water and pat dry.*

How long will the array last?

- *Depending upon water conditions, most arrays will last approximately 50-75 treatments prior to losing their conductive properties. Some practitioners have told us they have over 100 treatments on one array.*

How can I tell when to replace the array?

- *When the array no longer bubbles the electromagnetic properties are depleted and the array should be replaced.*
- *Check the bottom of the array for any excessive corrosion at the connecting points and to make sure there is a solid joint.*

Toxins found in Americans spur concern

By Seth Borenstein

KNIGHT RIDDER NEWSPAPERS

WASHINGTON — Michael Lerner and Sharyle Patton avoid red meat, buy organic produce and keep pesticides out of their Northern California home. Yet chemical analyses of their blood and urine found lots of toxins — 105 different ones for her, 101 for him.

He's got worrisome amounts of mercury, arsenic and lead. She's troubled by measurable levels of dozens of different forms of two industrial chemicals linked to cancer, dioxins and PCBs.

Two studies, one released yesterday by a New York hospital and a Washington environmental group, the other coming today from the U.S. Centers for Disease Control and Prevention, look at the prevalence of low levels of industrial and agricultural chemicals in Americans' bodies. The chemicals' presence isn't

necessarily harmful, but it raises questions about how they got there and what effects they have.

"We really made choices to avoid chemical exposures, yet as my wife said, what these tests demonstrate is that we all live in the same chemical neighborhood," Lerner said yesterday from his Marin County home in Bolinas.

Lerner and Patton were part of a \$200,000 two-year "Body Burden" study by the Environmental Working Group and New York's Mt. Sinai Hospital. It tested for 210 chemicals in the bodies of eight environmental and health activists, plus journalist Bill Moyers — an unusually small sample.

In those nine people — including a two-time cancer survivor who'd received chemotherapy — 167 different industrial and agricultural chemicals were found. The chemicals — including heavy metals, phosphate and chlorine compounds from insecti-

cides, dioxins and PCBs — have been linked to cancers, nervous system malfunctions and birth defects.

Today's CDC study will examine the issue differently. The CDC looked at a larger and more representative sample of 5,000 random Americans, but searched for only 116 chemicals. Last year, looking at only 27 chemicals, the CDC found nothing alarming.

Philip Landrigan, community and preventive medicine chief at Mt. Sinai, said his study illustrates the need for answers to serious questions about what these chemicals are doing in bodies when they interact with each other, and what doses are low enough to be safe.

In another story related to the human body, a preliminary study suggests the tips of the chromosomes in many cells shrink as you age, and that shrinkage might promote death from age-related disease.

Scientists found people older than 60 who showed shorter-than-average chromosome tips were nearly twice as likely than others to die over the next 15 years or so, especially from heart disease and pneumonia.

Experts called the finding intriguing but cautioned the study was far too small to let anybody draw conclusions.

The new work impressively bolsters the case that telomeres might play a role in human aging, said one expert, Dr. Woodring Wright of the University of Texas Southwestern Medical Center at Dallas. But like other scientists, he said the study must be repeated with many more participants to get a firmer result.

The study is reported this week in the journal *Lancet* by Dr. Richard Cawthon and colleagues at the University of Utah.

A report from the Associated Press was used in this story.
